

Shrouded Power Relay F4

- Pin assignment similar to ISO 7588 part 1
- Plug-in terminals
- **■** Customized versions on request
 - Integrated components (e.g. resistor, diode)
 - Customized marking

Typical applications

Cross carline up to 40A for example: ABS control, blower fans, car alarm, cooling fan, Electric Power Steering, energy management, engine control, fuel pump, heated front screen, lamps: front, rear, fog light, main switch/supply relay, valves, wiper control.

resistive load, NO contact	40A, 14VDC	20A, 28VDC

Contact Data	(continued)	
Mechanical endur	ance	>1x10 ⁶ ops.

- The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10.
- Current and time are compatible with circuit protection by a typical automotive fuse.
 Relay will make, carry and break the specified current.
- See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/
- 4) For unsuppressed relay coil. Any parallel device to the coil will increase the release time.
- Any diode or pn-junction parallel to the coil (internal or external) will significantly decrease the electrical lifetime, especially when used for inductive loads.

Coil Data

All figures are given for coil without pre-energization, at ambient temperature +23°C.

Max. DC load breaking capacity

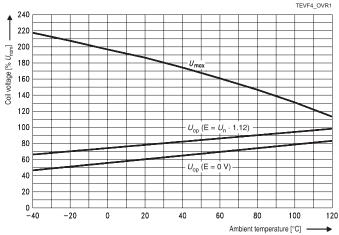

Load limit curve 1: arc extinguishes during transit time (changeover contact).

Load limit curve 2: safe shutdown, no stationary arc (make contact).

Load limit curves measured with low inductive resistors verified for 1000 switching events.

Coil operating range

Does not take into account the temperature rise due to the contact current F = pre-energization
